

Investment Grade Bond Fund

FUND FACTS

OBJECTIVE

Seeks high total investment return through a combination of current income and capital appreciation

Share class	Y
Inception	12/31/1996
Ticker	LSIIX
CUSIP	543487136

Market Conditions

- Global fixed-income markets delivered healthy gains in the second quarter, reflecting a combination of slowing economic growth, persistently low inflation and the US Federal Reserve's (Fed's) shift toward increasingly accommodative monetary policy. As late as the fourth quarter of last year, the markets generally anticipated that the Fed would continue to raise interest rates for at least another 12 months. As growth slowed both in the United States and overseas in late 2018 and into the first quarter, the Fed indicated that it would move to a neutral policy. More recently, the continued weakness in the global economy gave rise to expectations that the Fed would in fact cut rates at least once before the end of 2019. The change in the outlook for Fed policy fueled a strong, broad-based rally in bonds, the bulk of which occurred from mid-May onward.
- US Treasuries performed particularly well in this environment, with positive total returns across the maturity spectrum. The two-year yield, which tends to be more sensitive to shifts in Fed policy than longer-term issues, slid over fifty basis points. Longer duration segments of the curve produced the strongest price performance. The yield curve steepened as a result, with the gap between the two- and ten-year notes rising compared with its level at the end of the first quarter.
- Investment grade corporate bonds generated robust returns and outperformed duration matched US Treasuries. In addition to benefiting from the rally in rate-sensitive assets, corporates were aided by the backdrop of favorable investor risk appetites, rising equity markets and expectations that corporate earnings growth will remain in positive territory.
- High yield bonds posted positive absolute returns but finished somewhat behind investment-grade debt. The category's relative performance was affected by the sharp

CLASS Y PERFORMANCE (%)

	CUMULATIVE TOTAL RETURN		AVERAGE ANNUALIZED RETURN			
	3 MONTH	YTD	1 YEAR	3 YEAR	5 YEAR	10 YEAR
FUND	2.86	6.31	6.70	4.19	2.30	6.04

Performance data shown represents past performance and is no guarantee of, and not necessarily indicative of, future results. Investment return and value will vary and you may have a gain or loss when shares are sold. Current performance may be lower or higher than quoted. For most recent month-end performance, visit www.loomissayles.com.

Additional share classes may be available for eligible investors. Performance will vary based on the share class. Performance for periods less than one year is cumulative, not annualized. Returns reflect changes in share price and reinvestment of dividends and capital gains, if any. You may not invest directly in an index.

Gross expense ratio 0.57% (Class Y). Net expense ratio 0.51%. As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses once the expense cap of the fund has been exceeded. This arrangement is set to expire on 4/30/2021. When an expense cap has not been exceeded, the fund may have similar expense ratios and/or yields.

The Class Y inception date is 12/31/1996. Class Y shares are sold to eligible investors without a sales charge; other Classes are available for purchase.

decline in oil prices, which dampened the earnings prospects for the many energy-related high yield issuers. Still, high yield retains a sizable performance advantage in the year-to-date period through June 30.

- Domestic inflation remained calm in the second quarter, mirroring a trend that was in place across the globe. US core personal consumption expenditure inflation, after moving toward the 2% level late last year, settled back into a range between 1.5% and 1.7% thus far in 2019. Low inflation has been one of the key factors fueling expectations for Fed rate cuts.

Portfolio Review

- The fund underperformed its benchmark, the Bloomberg Barclays US Government/Credit Index, primarily due to its shorter duration positioning.

Winners

- The fund's underweight exposure to and longer duration positioning within US Treasuries positively contributed to performance.

Laggards

- The fund's allocation to securitized markets limited performance for the quarter as the segment lagged other areas of the investment grade bond market.
- Investment grade corporate credit constrained performance for the period primarily due to the fund's shorter duration positioning versus the benchmark in this sector.
- Exposure to high yield corporate credit detracted modestly from relative returns.

Outlook

- Economic activity has not progressed as positively as we had anticipated. Global and US manufacturing have come under pressure and trade war concerns have increased. Combined with the fact that inflation has been tame, these factors will likely lead the Fed to cut interest rates. While we don't believe that the Fed is facing a regime shift, we do expect it to provide accommodation with multiple rate cuts to help ward off recession and extend this cycle.
- The net effect of these potential cuts should be to support economic growth and relieve the modest inversion at the short end of the yield curve as those rates decline. We do not believe a US recession will occur over the next twelve months given the solid employment conditions and outlook for corporate profits. In addition, fundamentals remain intact and we still do not anticipate any significant uptick in corporate bond defaults.
- The US corporate bond markets have performed well year to date, supported by declining US rates. Spreads in both investment grade and high yield markets have contracted, largely reversing the difficult close to 2018.
- As valuations have shifted higher, we have taken some gains and have become increasingly patient and selective. However, yields in the US credit markets remain high relative to the rest of the developed world. More accommodative central banks should support economic growth and the demand for yield.

- We continue to maintain a level of reserves in our portfolios for future opportunities should markets experience a sharp pullback. This happened at the end of 2018 and to a lesser degree in May of this year, and both reversals were followed by rallies. We do strive to maintain as much yield as possible in these reserve-like positions.
- Our credit strategy remains focused on higher quality issues given the late expansion phase of the credit cycle.¹ We continue to be positive on the energy sector based on improved balance sheets and a favorable outlook for the price of oil. We are also maintaining exposure to the banking/financial sector as the overall credit quality remains positive, supported by tightened capital requirements.
- Our convertible allocation is focused on idiosyncratic stories, predominantly within energy, technology, and healthcare. We maintain a selective, patient approach to this sector due to valuations.
- Trade wars, specifically with China, and softening global manufacturing remain the principal risks to our outlook. We expect some modest controlled escalation in the trade situation. Any such escalation and further weakness in global manufacturing could drive volatility and create potential opportunity.
- We believe our portfolios are well positioned with an appropriate balance of risk, yield, liquidity and diversification to drive returns in the current environment. Our defensive or reserve positions give us future flexibility to adapt to changing markets and to identify opportunities as they arise.

About Risk

Fixed income securities may carry one or more of the following risks: credit, interest rate (as interest rates rise bond prices usually fall), inflation and liquidity. **Foreign and emerging market securities** may be subject to greater political, economic, environmental, credit, currency and information risks. Foreign securities may be subject to higher volatility than US securities due to varying degrees of regulation and limited liquidity. These risks are magnified in emerging markets. **Below investment grade fixed income securities** may be subject to greater risks (including the risk of default) than other fixed income securities. **Mortgage-related and asset-backed securities** are subject to the risks of the mortgages and assets underlying the securities. Other related risks include prepayment risk, which is the risk that the securities may be prepaid, potentially resulting in the reinvestment of the prepaid amounts into securities with lower yields.

***Bloomberg Barclays US Government/Credit Index** includes securities in the Government and Credit Indices. The Government Index includes Treasuries (i.e., public obligations of the US Treasury that have remaining maturities of more than one year) and agencies (i.e., publicly issued debt of US Government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the US Government). The Credit Index includes publicly issued US corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements. Indexes are unmanaged and do not incur fees. It is not possible to invest directly in an index.*
