## FUND (Y CLASS) AS OF 11/30/2025 (%)

■ LS Limited Term Government and Agency Fund (Y Class) ■ Bloomberg U.S. Government, 1-5 Years Index

	Cumulative Return			Average Annual Total Return		
Excess Return	+0.01	+0.02	-0.06	+0.48	+0.55	+0.11

**Past performance is no guarantee of future results. Investment return and principal value may fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance data quoted represents past performance, and current returns may be higher or lower. For the most recent performance information, please visit [loomissayles.com](http://loomissayles.com).**

Gross expense ratio 0.52% (Class Y). Net expense ratio 0.45%. As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses once the expense cap of the fund has been exceeded. This arrangement is set to expire on 1/30/2026. When an expense cap has not been exceeded, the fund may have similar ratios and/or yields.

Returns for periods of up through one year are not annualized. Returns for periods of greater than one year are annualized. Information is reported on a trade date basis.

Data Source: Bloomberg. The benchmark is Bloomberg U.S. Government, 1-5 Years Index.

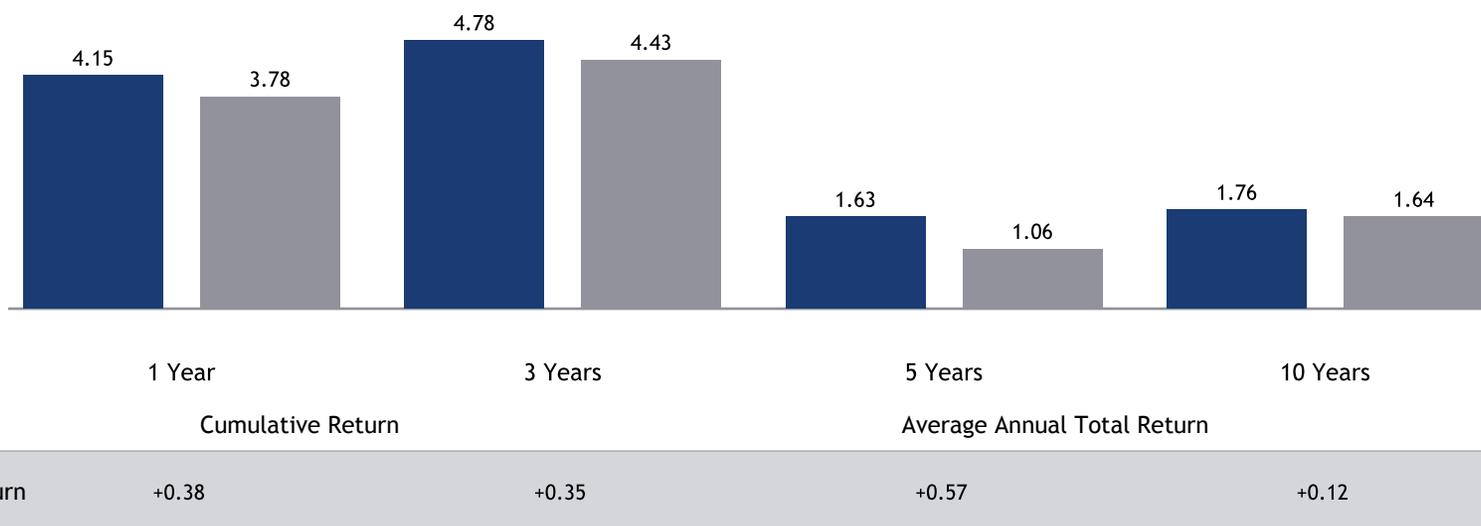

The Bloomberg U.S. 1-5 Year Government Bond Index is a subindex of the U.S. Government Index and is comprised of the U.S. Treasury and U.S. Agency Indices. The U.S. Government Index includes Treasuries (public obligations of the U.S. Treasury that have remaining maturities of more than one year) and U.S. agency debentures (publicly issued debt of U.S. Government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. Government). The U.S. Government Index is a component of the U.S. Government Credit Index and the U.S. Aggregate Index.

Indices are unmanaged. It is not possible to invest directly in an index.

**Please see performance page for further performance-related details on this fund.**

*The 30-day SEC yield is a standardized calculation, calculated by dividing the net investment income per share for the 30-day period by the maximum offering price per share at the end of the period and annualizing the result. Treasury Inflation-Protected Securities (TIPS) are designed to provide protection against inflation through monthly adjustments to the principal value of TIPS, which increases with inflation and decreases with deflation as measured by the Consumer Price Index. Monthly principal adjustments for inflation (increases and decreases) are excluded from the 30-day SEC yield calculation. Such adjustments can vary substantially from one month to the next, and if they were included, may materially impact the 30-day SEC yield either higher or lower. A subsidized 30-day SEC yield reflects the effect of fee waivers and expense reimbursements. The SEC yield is not based upon distributions of the fund and actual income distributions may be higher or lower than the 30-day SEC yield amounts. During periods of unusual market conditions and/or activity in the sales or redemptions of fund shares, the fund's 30-day SEC yield amounts may be materially higher or lower than its actual income distributions. Unsubsidized 30-day SEC yield is calculated using the gross expenses of the fund. Gross expenses do not include any fee waivers or reimbursements.*

*Portfolio characteristics are from the adviser's internal system and may not match the fund's regulatory documents. Due to rounding, Sector, Currency, Country, Quality, Duration, and Maturity totals may not equal 100%.*

# characteristics - definitions

Average Maturity (years)	Maturity is the date on which the life of a transaction or financial instrument ends, after which either it must be renewed or it will cease to exist.
Average Effective Duration (years)	Effective duration calculates the expected price decline for a bond when interest rates rise by 1%. All else equal, the longer the maturity of a bond, the larger its effective duration. However, the value of the effective duration will always be lower than the maturity of the bond. Effective duration is a duration calculation for bonds that have embedded options. This measure of duration takes into account the fact that expected cash flows will fluctuate as interest rates change.
Average Modified Duration (years)	Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration follows the concept that interest rates and bond prices move in opposite directions. This formula is used to determine the effect that a 100-basis-point (1%) change in interest rates will have on the price of a bond.
Average Yield (%)	Yield to worst (YTW). The YTW is the lowest potential yield that can be received on a bond without the issuer actually defaulting. The YTW is calculated by making worst-case scenario assumptions on the issue by calculating the return that would be received if the issuer uses provisions, including prepayments, calls, or sinking funds. This metric is used to evaluate the worst-case scenario for yield to help investors manage risks and ensure that specific income requirements will still be met even in the worst scenarios.
Current Yield (%)	Current yield is an investment's annual income (interest or dividends) divided by the current price of the security. This measure looks at the current price of a bond instead of its face value. Current yield represents the return an investor would expect if the owner purchased the bond and held it for a year, but current yield is not the actual return an investor receives if he holds a bond until maturity.
Average Coupon (%)	A coupon rate is the yield paid by a fixed-income security; a fixed-income security's coupon rate is simply the annual coupon payments paid by the issuer relative to the bond's face or par value. The coupon rate is the yield the bond paid on its issue date.
Number of Issues	Issue is the process of offering securities as an attempt to raise funds. Companies may issue bonds or shares to investors as a method of financing the business. The term "issue" also refers to a series of stocks or bonds that have been offered to the public and typically relates to the set of instruments that were released under one offering.
Market Value	The price an asset would fetch in the marketplace if sold.
Average Convexity	Convexity is a measure of the curvature in the relationship between bond prices and bond yields that demonstrates how the duration of a bond changes as the interest rate changes.
Average Yield to Maturity (%)	Yield to maturity (YTM) is the total return anticipated on a bond if the bond is held until the end of its lifetime. YTM is considered a long-term bond yield but is expressed as an annual rate. In other words, it is the internal rate of return of an investment in a bond if the investor holds the bond until maturity and if all payments are made as scheduled.
Average Option Adjusted Spread (bps)	The option-adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return, which is adjusted to take into account an embedded option. Typically, an analyst uses the Treasury securities yield for the risk-free rate. The spread is added to the fixed-income security price to make the risk-free bond price the same as the bond.

# Is limited term government and agency fund

## RISK DISCLOSURES

Fixed-income securities/bonds may carry one or more of the following risks: credit, interest rate (as interest rates rise bond prices usually fall), inflation, and liquidity.

Mortgage-related and asset-backed securities are subject to the risks of the mortgages and assets underlying the securities. Other related risks include prepayment risk, which is the risk that the securities may be prepaid, potentially resulting in the reinvestment of the prepaid amounts into securities with lower yields.

U.S. government agency securities are not insured and may not be guaranteed by the U.S. government.

When Issued, Delayed Delivery and Forward Commitment Securities Risk: Securities purchased on a forward commitment, when-issued or delayed delivery basis are subject to many of the same risks (such as market risk and interest rate risk) as other securities. In addition, when-issued and delayed delivery securities are subject to other risks including loss of value prior to delivery; the security may not be issued; or a counterparty to the transaction may not meet its obligations.
