**Highlights**

- High conviction, active credit manager
- Benchmark unconstrained, multisector fixed income strategy that seeks to provide a favorable total return with a low correlation to traditional fixed income
- Flexible investment framework with the capability to invest across global fixed income markets while seeking to provide consistent investment results throughout market cycles
- Keen focus on risk and drawdown consistent with capital preservation

**Objective**

Seeks to provide an attractive absolute total return, complemented by prudent investment management designed to manage risks and protect investor capital. The secondary goal of the fund is to achieve these returns with relatively low volatility

The Bloomberg US Aggregate Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the US investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indices that are calculated and reported on a regular basis. Indexes are unmanaged and do not incur fees. It is not possible to invest directly in an index.

## About Risk

**Fixed income securities** may carry one or more of the following risks: credit, interest rate (as interest rates rise bond prices usually fall), inflation and liquidity. **Below investment grade fixed income securities** may be subject to greater risks (including the risk of default) than other fixed income securities. **Currency** exchange rates between the US dollar and foreign currencies may cause the value of the fund's investments to decline. **Derivatives** involve risk of loss and may entail additional risks. Because derivatives depend on the performance of an underlying asset, they can be highly volatile and are subject to market and credit risks. **Foreign and emerging market securities** may be subject to greater political, economic, environmental, credit, currency and information risks. Foreign securities may be subject to higher volatility than US securities due to varying degrees of regulation and limited liquidity. These risks are magnified in emerging markets. **Mortgage-related and asset-backed securities** are subject to the risks of the mortgages and assets underlying the securities. Other related risks include prepayment risk, which is the risk that the securities may be prepaid, potentially resulting in the reinvestment of the prepaid amounts into securities with lower yields. **Commodity-related** investments, including derivatives, may be affected by a number of factors including commodity prices, world events, import controls and economic conditions, and therefore may involve substantial risk of loss. **Non-diversified** funds invest a greater portion of assets in fewer securities and therefore may be more vulnerable to adverse changes in the market. **Short exposures** using derivatives may present various risks. If the value of the asset, asset class or index on which the Fund holds short investment exposure increases, the Fund will incur a loss. The potential risk of loss from a short exposure is theoretically unlimited, and there can be no assurance that securities necessary to cover a short position will be available for purchase.

**Diversification does not ensure a profit or guarantee against a loss.**  
**Any investment that has the possibility of profits also has the possibility.**

The Fund's composition statistics are from the adviser's internal system and may not match the fund's regulatory documents. This Fund is actively managed and holdings are subject to change. There is no guarantee the fund continues to invest in the securities referenced. The top ten issuers may not be representative of the fund's current or future investments. Data presented above is intended to illustrate the fund's exposure to certain asset classes. The fund may use the market value, the notional value or an adjusted notional value of a derivative in order to reflect what the Adviser believes to be the most accurate assessment of the fund's real economic exposure. **Top Ten Issuers** shown do not include cash and cash equivalents, currency forwards, currency options and derivative offsets, included in the fund's total net assets. **Strategy Exposure** does not include derivative offsets, included in the portfolio's total net assets. The fund's long and short investment exposures may, at times, each reach 100% of the assets invested in the portfolio (excluding derivatives used for duration management or yield curve management and cash and cash equivalents), although these exposures may be higher or lower at any given time. **Cash & Equivalents** reflects unsettled trades, fees and derivatives.
