

Intermediate Duration Bond Fund

Fund Facts

OBJECTIVE

Seeks above-average total return through a combination of current income and capital appreciation

Share class Y
Inception 1/28/1998
Ticker LSDIX
CUSIP 543495709

Benchmark Bloomberg US Intermediate Government/Credit Bond Index

Bloomberg US Intermediate Government/Credit Bond Index includes securities which have a remaining maturity of 1-10 years and includes Treasuries (public obligations of the US Treasury that have remaining maturities of more than one year) and agencies (publicly issued debt of US government agencies, quasi-federal corporations and corporate or foreign debt guaranteed by the US government), as well as other publicly issued investment grade corporate and noncorporate debentures that meet specified maturity, liquidity, and quality requirements. Indices are unmanaged. It is not possible to invest directly in an index.

Market Conditions

- Bonds produced a modest gain in the second quarter, with income accounting for the bulk of the total return. Expectations that the lingering effects of the conflict in Iran would cause inflation to reaccelerate prompted investors to price in tighter central bank policy. While in the autumn of 2025 the markets were anticipating that the US Federal Reserve (Fed) would enact as many as five quarter-point interest rate cuts over the coming year, by the end of June expectations had shifted toward the possibility of at least one rate hike in the second half of 2026.
- Kevin Warsh replaced Jerome Powell as Fed Chairman in May. While investors speculated that Warsh would have a bias toward lower rates when his name was first floated as a potential Powell replacement in 2025, the new chair's initial comments pointed to a more hawkish tone. Most notably, Warsh indicated a desire to reinstate the Fed's 2% inflation target – a level not reached since before the COVID-19 supply shock in early 2021.
- US Treasuries produced tepid total returns in the quarter, reflecting investors' expectation that the US Federal Reserve may be compelled to begin raising interest rates in the second half of the year to head off rising inflation. The changing outlook for Fed policy led to underperformance for the belly of the yield curve, as the five-year bellwether maturity bucket produced the worst returns across the maturity spectrum. The yield on the two-year Treasury note climbed from 3.79% to 4.14% (as its price fell). Still, the two-year finished with a positive total return for the quarter due to the contribution from income. Longer-dated debt, which is less sensitive to Fed policy, held up better. The yield on the 10-year note rose less dramatically, moving from 4.30% to 4.44%. Interest return was more than enough to offset the negative price return, allowing the longer end of the curve record

Class Y Performance as of June 30, 2026 (%)

	CUMULATIVE TOTAL RETURN		ANNUALIZED TOTAL RETURN			
	3 MONTH	YTD	1 YEAR	3 YEAR	5 YEAR	10 YEAR
FUND	0.71	0.61	3.34	5.16	1.40	2.31
BENCHMARK	0.43	0.40	3.14	4.68	1.22	1.92

Performance data shown represents past performance and is no guarantee of future results. Investment return and value will vary and you may have a gain or loss when shares are sold. Current performance may be lower or higher than quoted. For most recent month-end performance, visit www.loomissayles.com.

Additional share classes may be available for eligible investors. Performance will vary based on the share class. Performance for periods less than one year is cumulative, not annualized. Returns reflect changes in share price and reinvestment of dividends and capital gains, if any. You may not invest directly in an index.

Gross expense ratio 0.50% (Class Y). Net expense ratio 0.40%. As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses (with certain exceptions) once the expense limitation of the fund has been exceeded. This arrangement is set to expire on 1/31/2027. When an expense limitation has not been exceeded, the fund may have similar expense ratios and/or yields.

Effective August 31, 2016, the fund's Institutional Class shares were redesignated as Class Y shares. Accordingly, the returns shown in the table for Class Y shares prior to August 31, 2016 are those of Institutional Class shares. The fund revised its investment strategies on 5/28/2010; performance may have been different had the current investment strategies been in place for all periods shown.

positive total returns. The yield curve flattened as a result of these moves.

- Investment-grade corporates produced a healthy total return in the second quarter. Yield spreads experienced a meaningful decline as hopes for an end to the conflict in Iran led to a resurgence in investors' appetite for risk. According to the Federal Reserve Bank of St. Louis, the option-adjusted spread on the ICE BofA US Corporate Index fell from 90 basis points (0.90 percentage points) on March 31 to 76 basis points on June 30. This trend, in combination with the contribution from income, helped corporates outpace Treasuries by a comfortable margin.
- While securitized credit generated positive returns during the quarter, the category lagged corporate bonds. Agency mortgage-backed securities (MBS) posted gains. The category was supported by favorable technicals, with limited net supply and steady demand from government-sponsored enterprises and other market participants. In securitized credit, collateralized loan obligations (CLOs), asset-backed securities (ABS), residential mortgage-backed securities (RMBS), and consumer ABS were the leaders in terms of total returns, while commercial mortgage-backed securities (CMBS) delivered more muted performance.

Portfolio Review

- The fund outperformed its benchmark, the Bloomberg US Intermediate Government/Credit Index, primarily due to sector allocation decisions.

Contributors

- Investment grade corporate bond exposure was beneficial to excess return, due in large part to allocation effects, but security selection was also positive.
- US Treasury positions were a tailwind to performance over the period.
- Exposure to securitized credit was additive as well by way of strong positive issue selection.

Detractors

- Security selection effects within US Treasuries were negative.
- The underweight position within government-related holdings generated slightly negative allocation effects.
- The lack of municipals exposure also marginally weighed on excess return via allocation effects.

Outlook

- Fixed income markets delivered positive total returns for the second quarter as rates reversed from the mid-May peak, despite a backdrop of a strong US economy and record quarterly equity market returns. US corporate earnings continued to impress (driven in large part by continued robust AI spend) and jobs growth exceeded expectations. Under this stronger economic backdrop, a sharp drop in Middle East tensions helped moderate rates and fueled risk markets. By end of quarter, global oil prices had fallen back to pre-war levels, as the US and Iran implemented a 60-day cease-fire. Credit spreads also narrowed and remain near historic tight, with demand for new issues remaining robust. As anticipated, the

Federal Reserve (Fed) stayed on hold in Kevin Warsh's first meeting as new Fed Chair, but with a more hawkish press conference post FOMC (Federal Open Market Committee) and Statement of Economic Projections. The lack of forward guidance was also in focus, fulfilling one of Warsh's pre-nomination promises. Treasury yields initially rose across the board immediately following the Fed statement, before moderating in the following weeks as markets digested the Fed's new more hawkish stance. Fed Fund Futures markets are currently pricing in around 35 bps of rate hikes by year-end, a reversal of what was priced just three months prior, when investors had anticipated as many as one or more cuts by year-end 2026.

- Corporate fundamentals remain at a healthy level by historical standards, buoyed by the boom in AI-related capex. However, corporations may eventually seek to pass through higher input prices or shed labor to preserve margins. Consumer demand in aggregate has remained resilient, despite higher inflation, supported by stable job markets and wealth effects. The "K"-shaped economy continues to be the narrative, with higher income earners maintaining strong spending, but lower income earners feeling the pinch from higher food, energy and housing/rental costs.
- We continue to believe that we are in the late expansion phase of the credit cycle, and anticipate an eventual return to more trend-like growth and importantly, moderating inflation, as the effects of tariffs and disruptions to the supply of oil dissipate. Aggregate demand could continue to be resilient with recession risks remaining low, but remain a concern, especially in light of current risk market valuations. Key risks include a stock market correction and diminished wealth effect, a resumption in the conflict in Iran, continued tight oil supplies through summer and the fall, an increase to the fiscal burden, and potentially overly reactive monetary policy.
- The strategy's corporate bond risk relative to benchmark increased slightly over the quarter. Current relative risk exposure is slightly above one third of risk budget. For mandates which allow for non-investment grade allocations, the team continues to hold a small number of issuers we believe offer value.
- We believe asset backed securities (ABS) continue to be a favorable alternative to front end US Treasuries. We generally favor consumer related collateral and prefer the top part of the capital stack but are not limited to the highest quality band of the capital structure. Currently, the strategy's ABS risk relative to benchmark is slightly above one-third of risk budget.
- The strategy continues to hold commercial mortgage-backed securities (CMBS), with the current benchmark relative risk in the lower half of the risk budget. When opportunities arise within CMBS, we tend to favor senior parts of the capital stack.
- We continue to follow our process of seeking building diversified portfolio while favoring asset classes that we believe can generate security selection.

About Risk

Fixed income securities may carry one or more of the following risks: credit, interest rate (as interest rates rise bond prices usually fall), inflation and liquidity. **Mortgage-related and asset-backed securities** are subject to the risks of the mortgages and assets underlying the securities. Other related risks include prepayment risk, which is the risk that the securities may be prepaid, potentially resulting in the reinvestment of the prepaid amounts into securities with lower yields. **Foreign and emerging market securities** may be subject to greater political, economic, environmental, credit, currency and information risks. Foreign securities may be subject to higher volatility than US securities due to varying degrees of regulation and limited liquidity. These risks are magnified in emerging markets. **Below investment grade fixed income securities** may be subject to greater risks (including the risk of default) than other fixed income securities.
